15400 Biweekly Report 1  
Feb 15, 2018

### **Major Changes**

There has not been major changes. I have been experimenting with the output of an algorithm with some datasets with different metrics.

### **What I have accomplished so far**

I have got familiar with a PhD student's algorithm, corresponding code and has integrated different datasets with the code, and have been running different experiments on the outcome of the algorithm.

### **Meeting my milestone**

We have been trying to set up an experiment framework by the end of this week, but so far we're still in this process.

### **Surprises**

The output of the algorithm was not as good as we thought on some data; thus we are finding different ways to improve the outcome.

### **Looking Ahead**

As we are trying to meet a paper deadline in March, I'm trying to get the initial results out as soon as possible.

### **Revisions to my milestones**

From now until March 8, I will stick to the biweekly milestones of making corresponding progress on the paper.

### **Resources needed**

I have all the resources that I need.
